Apache HTTP Server introduction: Learn how to configure ...

1. In order to have a running production web server, you need a dedicated node (Physical/Virtual or cloud instance) running Linux/Unix, Windows, MacOS etc. 2. The Web Server must have a direct network connection and a static IP address configured on it. 3. It needs to have all the modules required for running web pages. If a web server processes PHP pages, it needs to have PHP module enabled.

Apache Tutorials for Beginners - Guru99

With Apache 1.3, Apache runs as multiple processes, each of which is capable of handling incoming HTTP requests. A single parent process, running as root, manages the pool of available servers, creating new ones as they are needed, and reaping excess ones when load is reduced.

Introduction to the Apache Web Server

Apache started its life as modifications to the NCSA Web server, one of the first HTTP servers. You can learn more about Apache's history here: The Apache project has grown beyond building just a web server into developing other critical server side technologies. The Apache Software Foundation, described in a later section, serves as an umbrella for these projects. 2.1 Architecture There are two main versions of Apache, the 1.3 series and the 2.0 series. Although both versions are
