Existing laws permit our children and us to be legally contaminated with untested substances that may be toxic. We are “legally poisoned.” Since the hardcover publication of Legally Poisoned in 2011, a number of studies have reinforced its concerns. New York University researchers found that the chemical bisphenol-A (BPA)—previously known to cause hormone abnormalities, asthma, behavioral problems and obesity—is linked to heart disease in children.

Poisoning. A poisoned bait may take the form of a pigeon or rabbit carcass or piece of meat which has been sprinkled with poison. Sometimes eggs are injected with poison, often discolouring the contents of the egg. Many poisons are fast acting so the victims are often found close to the baits. The abuse of the agricultural pesticide carbofuran, which was banned in 2001, to illegally poison birds of prey and other wildlife has become a particular concern.

Poisons: Lethal vs Toxic . Looking at the list of poisons, you might be tempted to think lead is safer than salt or bee sting venom is safer than cyanide. Looking at the lethal dose can be misleading because some of these chemicals are cumulative poisons (e.g., lead) and others are chemicals your body naturally detoxifies in small amounts (e.g., cyanide).

List of Poisons and the Relative Toxicity of Chemicals

That must change, UC Riverside professor Carl Cranor argues in a new book, “Legally Poisoned: How the Law Puts Us at Risk from Toxicants” (Harvard University Press, 2011). The current harm-based or risk-of-harm-based legal structure for regulating exposure to toxic substances is problematic, says Cranor, a professor of philosophy and longtime advocate of reforming U.S. regulatory policies.
